Case Study

NICCO Timber Windows & Doors

Bellevue Hill Project

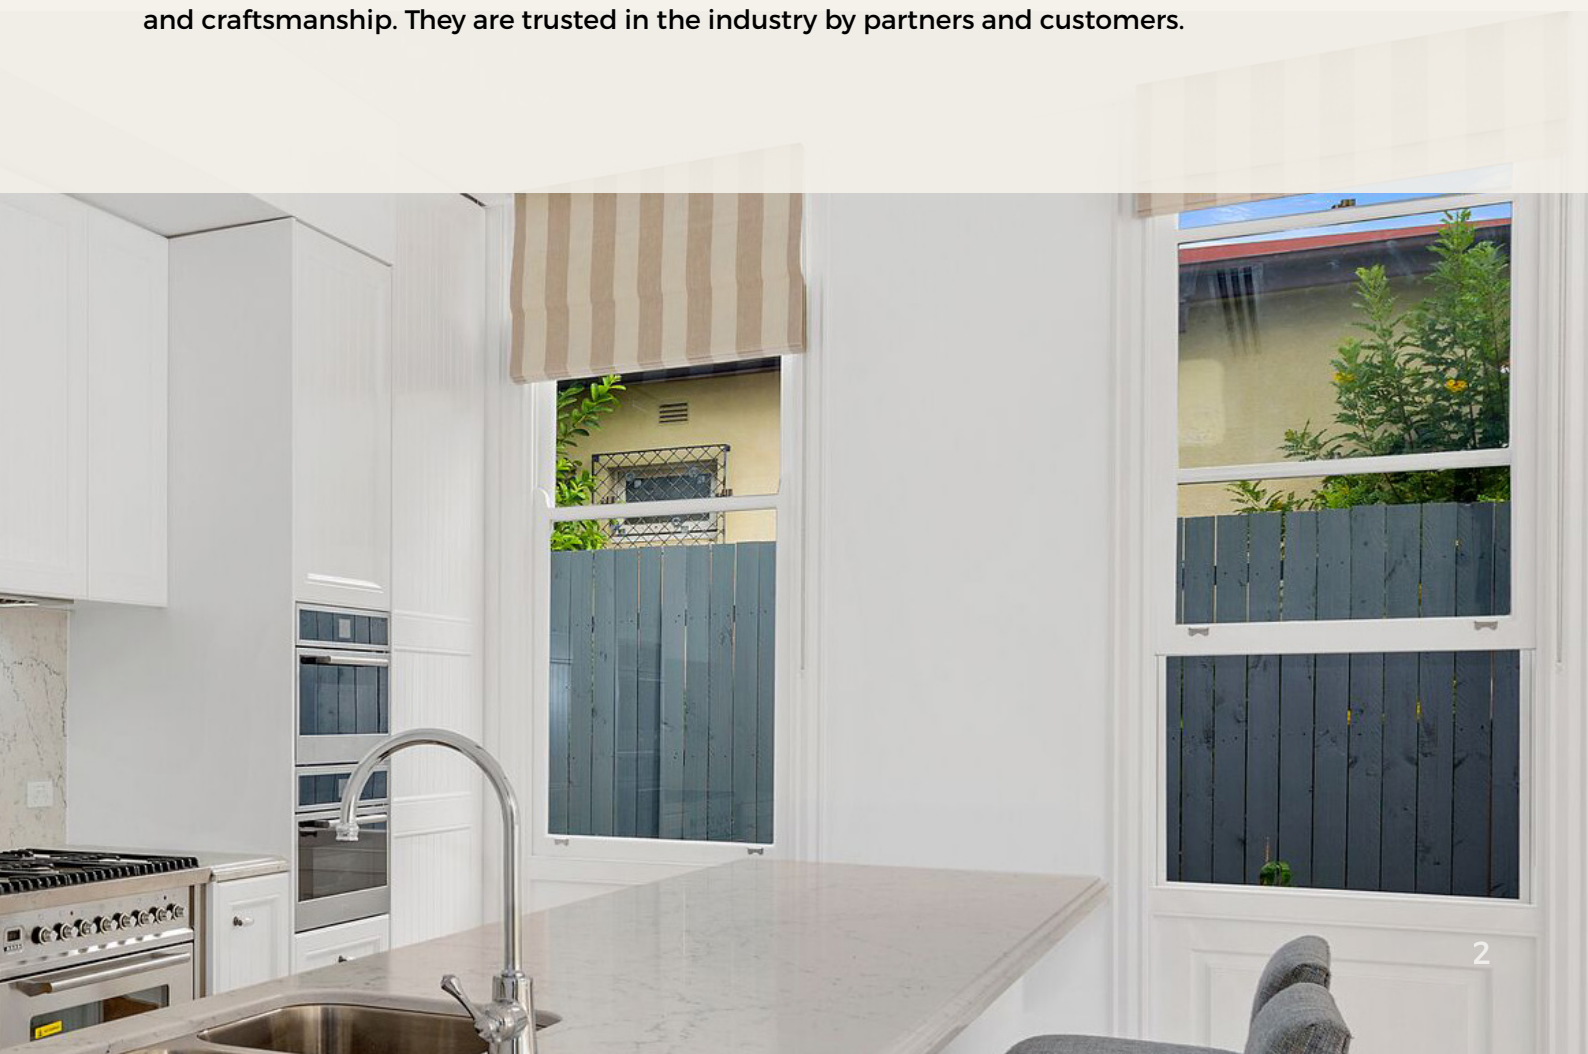

BELLEVUE HILL PROJECT

When the builder embarked on the exciting Bellevue Hill project he transformed a brick house into a modern elegant two story home. Situated in an ideal pocket of Bellevue Hill this contemporary four bedroom, two bathroom home has two car spaces and sits on 627m2.

The windows and doors were supplied by NICCO Timber Windows and Doors. They include double hung windows, fixed glass windows, bifold doors, sliding doors, and single and double doors. NICCO has a longstanding relationship with the builder.

NICCO Timber Windows and Doors was founded in 1998 by Nicholas Toskas. It is now a second generation business with Nick's sons John and Con Toskas who took over the reins guiding the business some years ago. There are now over 40 employees and NICCO occupies a state-of-the-art 3,000 square metre manufacturing facility.

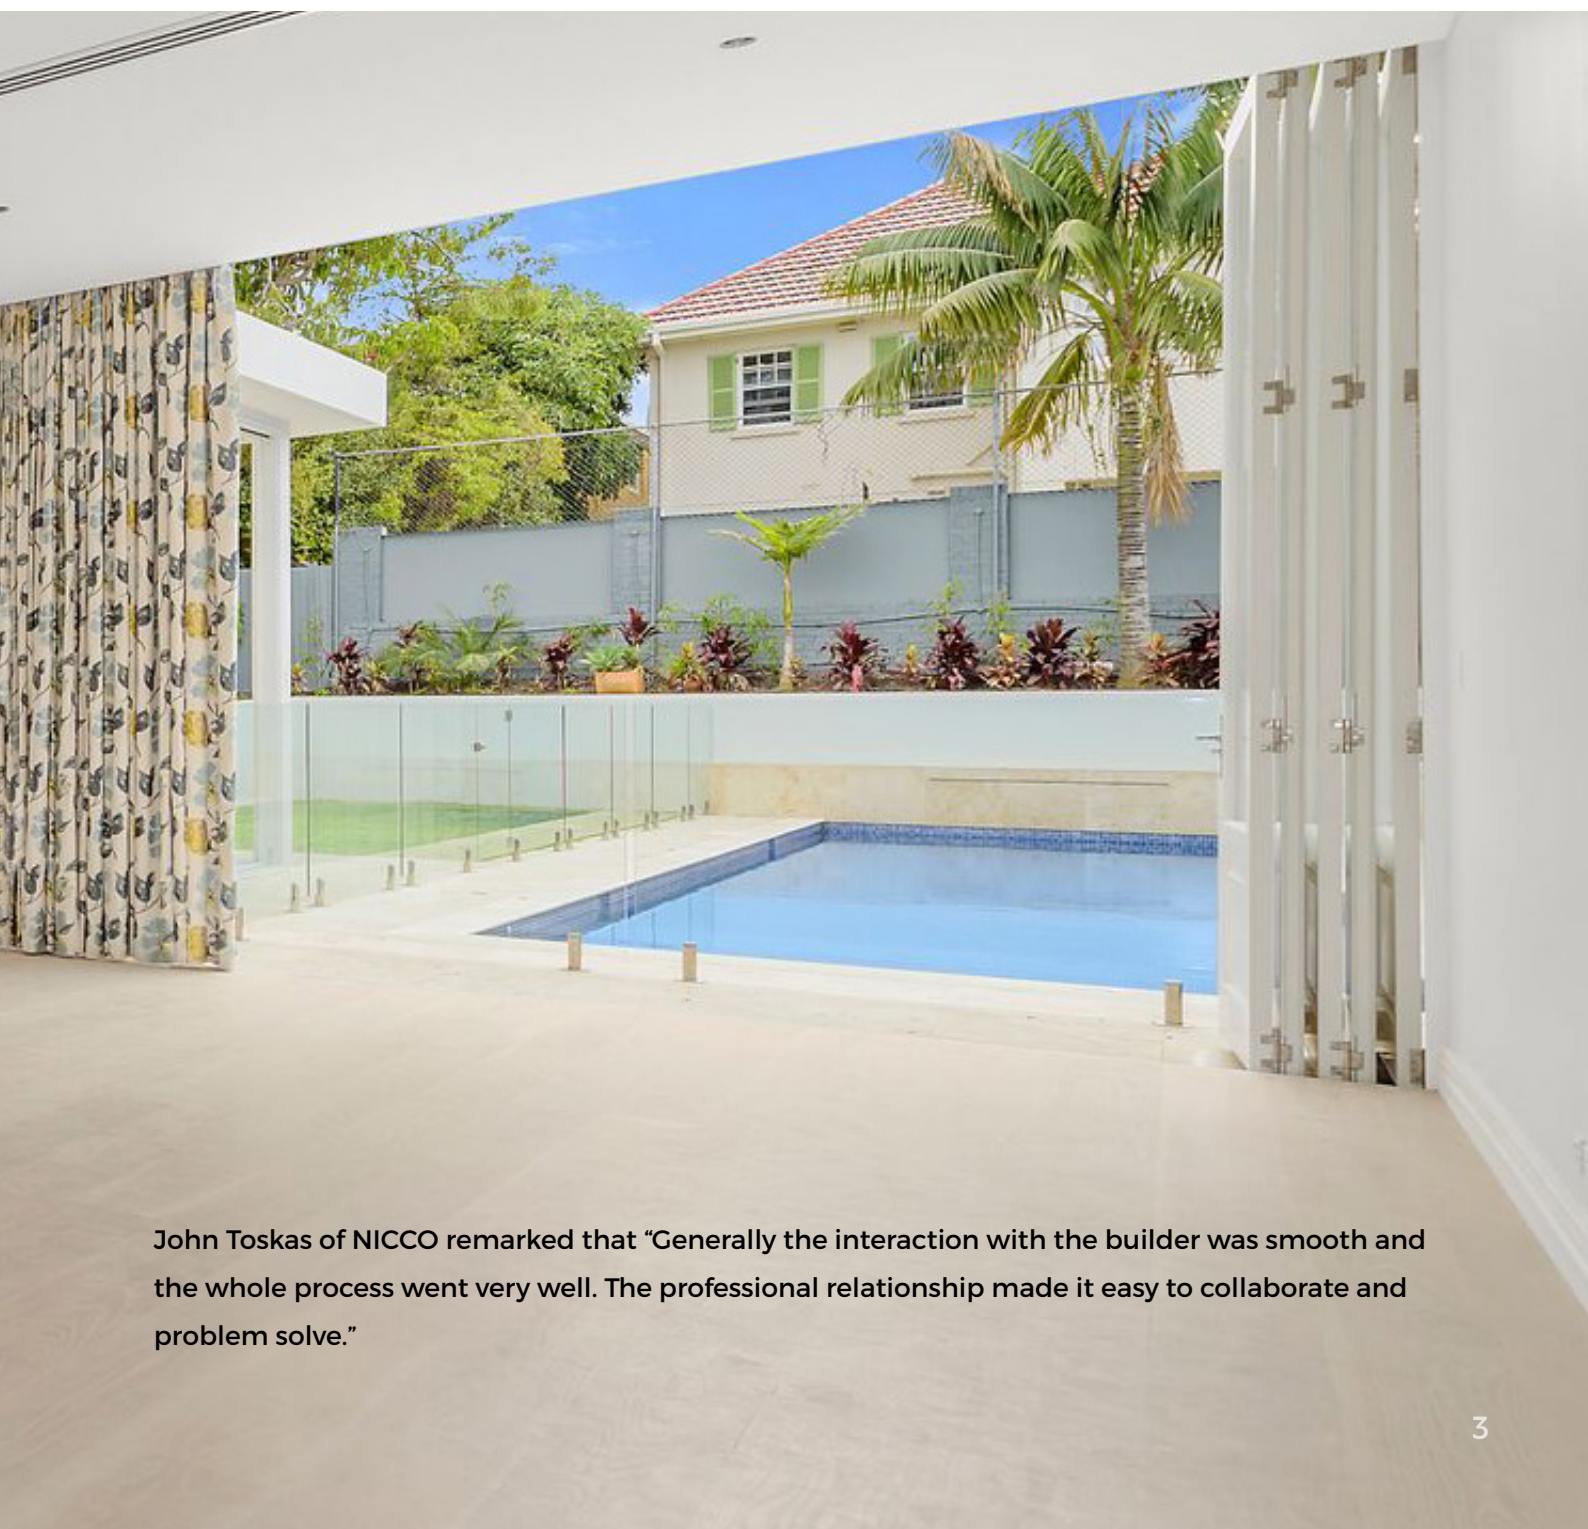

NICCO is a prestigious timber window and door manufacturer with superior products and services in both standard and bespoke designs. The business operates with high quality detail and craftsmanship. They are trusted in the industry by partners and customers.

CHALLENGES

The project had Large complex windows that required custom hardware. NICCO solved the problem by sourcing specialised hardware that could handle the sash weight of the extra large double hung windows. There were tall doors that required NICCO to increase the thickness of the door panels and heavy duty bifold hardware needed to be sourced separately.

One of the standout attributes of NICCO is their ability to help solve problems quickly, which makes them a valuable asset on any build. NICCO are experts in the field and that knowledge translates to them being thought leaders in the industry. They are often sought out for advice.

John Toskas of NICCO remarked that “Generally the interaction with the builder was smooth and the whole process went very well. The professional relationship made it easy to collaborate and problem solve.”

NICCO proudly and regularly work with many builders and architects. For details on the services and materials provided on the project featured above or for further information on our services, head to [our website](#) and [contact us](#) today.
